MicroChoice High Graphics Solutions

Based at Michigan Packaging, MicroChoice offers several methods of achieving a high impact graphic corrugated carton when your customer requirements are beyond traditional post print capabilities.

Litho Lamination

Utilizing photo realistic offset litho capabilities and laminating litho in-line on a corrugator, even the most challenging graphic projects are no match for what we can provide.

The litho process begins with offset litho printed onto a SBS packaging grade liner. These "litho top sheets" (Shown Below) are then laminated to singleface corrugated utilizing the litho top sheet as the outside liner of the package.

In addition to providing the best graphic images available via offset litho, the package also allows for improved strength over a folding carton.

Contact Us

Please visit our [MicroChoice](#) website for additional information and helpful hints to assist you on your next high graphics project.

For a quote or additional questions regarding litho lamination uses and capabilities, please contact Dave Moreno at 513.259.0207, or via email at dave.moreno@mpcmason.com.
